

## SUMMARY

Accomplished professional and dynamic senior leader with 13+ years of hands-on experience developing and driving user-friendly interface strategies forward with a proven record steering and delivering major projects using TypeScript, Angular, Sass, and graphic design transformations. Ability to work in small or large teams of developers, and lead a number of developers as a front-end leader and mentor. Thrives in low- or high-volume environments with ability to navigate changing business needs, and in implementing unique strategies and innovative designs to increase the overall business vision. Seeking a JavaScript-focused position on a performant front-end development team.

## EXPERIENCE

### Senior Software Engineer

November 2019–March 2020

#### Personal Strengths Publishing

Works closely with the design and engineering teams building out the Core Strengths “Relationship Intelligence” Angular application while also advocating for improvements to process and procedures for the growing team.

### Senior Web Developer

July–November 2019

#### Arlo Technologies

Responsible for leading a new product initiative for the web team, introducing best standards and practices to the development process, and assisting with the migration of the Arlo web client from AngularJS to Angular.

### Senior Front-End Developer

2010–2019

#### Atria Wealth Solutions

Acquired CUSO Financial Services in 2017

Reports to the Senior Vice President of Software Development and entrusted to work with managers, stakeholders, and developers researching user needs, informing technical and UI designs, and executing on those designs, with a focus on strong front-end design and development practices. As a senior developer, this position requires complete ownership of designated areas of responsibility including the ongoing design, development, testing, release, maintenance, upgrades, stability, and availability of all front-end systems owned by the Atria engineering team while working remotely.

- Implemented and retained the design, development, and maintenance of the Angular app, Sass-based stylesheets, and Haml-based view templates while working closely with back-end Rails/PostgreSQL team to negotiate, influence the
